**Airline Column?** If you haven't already, we suggest that you fill in the "Airline" field for all of your aircraft that are associated with companies, organizations, or airlines and perhaps even for privately-owned aircraft, too. In many cases, this will improve the look of your logbook with the corresponding logo, and more importantly, will allow you to (if you wish) take advantage of a number of airline-focused features that we are increasingly integrating into Safelog that will make your logging experience faster and more accurate. You can assign the same airline to multiple aircraft at once by using the checkboxes next to each aircraft and then selecting "Assign Airline" from the "Action for Selected" drop-down at top.

Safelog has detected certain potential problems and/or issues with aircraft and aircraft type records that you have in your logbook. To see detected issues, please click on the button below. The list of what Safelog has detected appears on the bottom of the 'aircraft' screen of our web portal interface -- this means that you may find it best to do this on a large-screen device such as full-sized computer or tablet.

[Click here to see and resolve possible aircraft issues now](#)

The above notice was generated the last time you synchronized your logbook with the SafelogWeb servers. If you have since fixed any such issues here locally (but have not yet performed a sync), then you can ignore this message.
